

**NAME**

psync - A naive tool for syncing partitions using rsync

**SYNOPSIS**

**psync** [<sections>] [--verbose | --quiet] [options]

**DESCRIPTION**

**psync** is a tool to help you keep pairs of partitions in sync using *rsync*.

**psync** was primarily built to simplify the process of keep in sync two copies of a whole linux system with (possibly) several partitions. Using **psync** you can achieve that with a single command.

**OPTIONS****--version**

Print psync's version.

**-h, --help**

Print psync command line options.

**-v, --verbose**

Increase verbosity.

**-q, --quiet**

Suppresses normal output.

**-d, --dry**

Perform a trial run with no changes made. Useful for checking your config.

**-r, --reverse**

Sync files from target to source.

**-n, --no beep**

Don't play a beep when finished.

**-c, --config <config\_file>**

Load a config file from a custom location. The default location is `~/config/psync/config.yaml`
